

NATURAL GAS

Safety spot

Carbon monoxide safety

Let the alarm ring

Install at least one CO detector on each level of your home and inspect them regularly.

Keep it outside

Never use an outdoor appliance inside, as tempting as a basement grilling session may be.

Know the signs

Symptoms like dull headaches, dizziness, nausea, or confusion can be a sign of CO exposure.

Mind your vents

Make sure your vents are clear of obstructions that could block CO from making its way outside.
